

Agentic Commerce Is Here

How AI agents can transact, book, pay and operate

AI agents are moving beyond answers.

They can now complete business tasks.

Where I have presented this work

Amazon	Voice intake and a structured triage handoff
Tencent	AI video and audio workflows
Stripe	Agents sending and receiving payments

Agentic commerce starts when a person states the result they want and the agent completes the work.

Eight workflows

01 Book and pay with an agent

02 Prepare a business travel guide

03 Monitor new and relevant opportunities

04 Answer new questions from trusted business data

05 Use company knowledge without exposing it

06 Prepare expert handoffs from voice and documents

07 Prepare the regional close for review

08 Test agent workflows before release

Every workflow follows the same test.

Define the task. Complete it live. Verify the result.

Book and pay with an agent

Most assistants recommend a restaurant or send a payment link. This agent completes both tasks.

THE TASK

Find a restaurant, book a table, add the confirmation to the calendar and purchase a specialist market report.

WHERE THE WORK HAPPENS

Chope · Google Calendar · Tempo

OpenClaw verifies before it acts

The venue remains available for review

CHOPE

Whole Earth · four guests · 27 September 2026 · 7:30 PM

Two retained confirmations agree

CHOPE CONFIRMATION

EMAIL CONFIRMATION

Venue · date · time · party size: matched

The reservation also appears on the calendar

One approved operation stores the report

A separate retrieval proves delivery

Delivery closes the payment loop

DELIVERED PDF

1,429

PDF signature

Byte count

Digest agreement

Independent artifact checks

Turn customer intent into completed transactions

Most assistants stop at a list, link or form. This agent completes the booking and purchase. That means fewer steps from customer intent to a finished transaction.

Prepare a business travel guide

Business travellers need one plan, not five apps.

THE TASK

Combine meeting details, weather, transport, food and local guidance into one practical travel brief.

WHERE THE WORK HAPPENS

Meeting details · Weather · Transport · Official sources

Five official sources become one guide

OPENCLAW

Official sources ground the morning actions

ICA · ARRIVAL

Entry

SG Arrival Card and passport guidance

LTA · TRANSPORT

Transport

Rail, bus and journey planning options

MSS · WEATHER

Weather

Two hour nowcast before departure

Entry guidance · airport transfer · two hour nowcast

Personalize each trip without building every journey

The agent turns verified local information into a guide for each traveller. You can offer a personal service without preparing every itinerary by hand.

Monitor new and relevant opportunities

Useful opportunities appear across many sources and disappear quickly.

THE TASK

Scan the sources, remove repeats, verify what is still open and prepare a short list.

WHERE THE WORK HAPPENS

Public sources · Portals · Alerts

The agent exposes its qualification logic

The source and next step stay together

PRIORITY

AI Governance
Readiness Assessment

FIRST PRACTICAL CHECKS

Confirm foreign supplier eligibility.
Validate the company’s GeBIZ ID.

Find relevant opportunities earlier with less noise

The agent turns repeated updates into a focused opportunity list. You can respond earlier without reading every alert.

Answer new questions from trusted business data

You ask questions the current dashboard cannot answer.

THE TASK

Compare markets, find what drives the difference and show the answer clearly.

WHERE THE WORK HAPPENS

BigQuery · Business definitions · Visual summary

OpenClaw preserves the missing value

Singapore performance

In the latest completed 30-day period, Singapore leads every comparison market:

Market	Revenue	Orders	Avg. order value	Gross margin
Singapore	\$8.24M	38,281	\$215.32	\$3.90M
Malaysia	\$5.65M	26,168	\$216.05	\$2.76M
Indonesia	\$5.12M	23,641	\$216.67	\$2.53M
Thailand	\$3.92M	18,379	\$213.16	\$1.93M
Vietnam	\$3.25M	15,052	\$215.81	\$1.59M

Singapore's revenue is approximately **46% above Malaysia**, **61% above Indonesia**, **114% above Thailand**, and **154% above Vietnam**.

What drives the difference

- Order volume is the main observed driver.** Singapore has 38,281 orders—roughly 46–154% more than the comparison markets.
- Basket size is not the driver.** Singapore's \$215.32 average order value is broadly comparable, slightly below Malaysia, Indonesia, and Vietnam, and above Thailand.
- Singapore has a lower margin rate.** Its overall margin rate is about **47.3%**, versus approximately **48.7–49.4%** elsewhere—roughly 1.5–2.1 percentage points lower.
- Within Singapore, revenue is led by **Enterprise (\$3.32M)**, followed by Mid-market (\$2.25M), SMB (\$1.54M), and Consumer (\$1.14M). The lower margin rate appears consistently across segments, so the result is not isolated to one segment in these outputs.

These are observed relationships in the approved aggregates, not a causal attribution.

Nulls and caveats

- The comparison query's `null_canary` is **null for every market** and must remain visible as null.
- No source nulls are shown in the driver-query fields.
- The returned data does not average over period start/end dates; "latest completed period" is based on the approved 30-day

Singapore leads because it processed more orders

Answer the next approved question

Dashboards answer predefined questions. The agent uses the same trusted data to answer the next approved one, so you can move without waiting for another dashboard.

Use company knowledge without exposing it

Your policies, reports and project files should remain subject to the access rules your company manages.

THE TASK

Search approved Notion documents and answer with resolved citations.

WHERE THE WORK HAPPENS

Notion · Approved root · Existing access rules

Two policies disagree on when to notify

STANDARD

Research may begin

Low risk research may begin before notification if sources and observation times are preserved.

ADDENDUM

Notify the owner first

Notify the owner before legal, clinical or personnel research begins.

HUMAN DECISION REQUIRED

Which policy controls notification timing?

The source remains inside Notion

NOTION

OpenClaw Governed A... / [Synthetic Demo Policy] Review an...

Edited 18m agoShareLinkStarMore

[Synthetic Demo Policy] Review and Escalation Addendum

Demonstration document. Not an operating company policy.

Owner: Risk & Compliance | Effective: 12 August 2026 | Review: 12 February 2027

Purpose

This addendum defines the stricter review and notification rules for sensitive agent-assisted work.

Scope

It applies to financial, legal, clinical, personnel, reputational, privacy, and external-communication impact.

Required approval

The agent must stop before an impactful action. A qualified reviewer must approve the exact proposed action and its current terms.

Research notification

For legal, clinical, or personnel topics, the agent must notify the owner before beginning even low-risk read-only research.

Handling uncertainty

The agent must escalate uncertainty, missing authority, or conflicting instructions rather than execute.

Related standard

This addendum is intentionally stricter than the Important Action Approval Standard, which permits general low-risk read-only research before notification when sources and observation times are preserved. The disagreement must remain visible for reviewer resolution.

AMAZON BEDROCK

Inference blocked

Account security restriction

APPROVED ROUTE

Governed Notion + Luna

- One approved root
- Exact child documents
- Resolved citations
- Different root denied

Control what company knowledge reaches the model

The agent reads only approved Notion pages and uses Luna to synthesize a cited answer. Existing document access controls what can be used.

Prepare expert handoffs from voice and documents

Clinical and legal work starts with different inputs but needs the same thing: a clear handoff for review.

THE TASK

Turn voice intake into a clinical triage handoff and case files into a legal intake handoff.

WHERE THE WORK HAPPENS

Voice intake · Forms · Case files

A source document becomes a review ready handoff

Private inputs become a factual handoff

Give experts a clear starting point

The agent structures the intake before review. Clinicians and lawyers can focus on judgment instead of reconstructing the case.

Prepare the regional close for review

Finance teams spend days gathering records, matching balances and chasing missing documents.

THE TASK

Gather the records, complete routine checks and build one package for review.

WHERE THE WORK HAPPENS

Ledgers · Subsidiary ledgers · Supporting documents

The close package preserves its exceptions

OPENCLAW

The screenshot displays the OpenClaw Finance Operator chat interface. The chat window shows a list of synthetic aggregates and package verification details. The interface includes a sidebar with navigation icons, a chat area with a list of items, and a bottom bar with a message input field and status indicators.

Close faster without weakening financial control

The agent turns scattered close work into one finance review. You spend less time collecting and matching information and more time resolving the issues that close the books.

Test agent workflows before release

A workflow that worked yesterday can break after one change.

THE TASK

Run five saved business cases after each change and show what still works.

WHERE THE WORK HAPPENS

Saved workflow results · Isolated test environment ·
Release gate

The evaluator refuses to invent the totals

Seven workflows pass the release check

PRE RELEASE WORKFLOW TEST

Booking · travel · opportunities · trusted data · company knowledge · expert handoffs · finance

7 / 7

workflow scenarios

14 / 14

observed turns

10 / 10

reconciliation checks

0

fallbacks

Catch failures before customers do

The same cases run after every change. You see what broke and whether the fix worked before customers use it.

WHAT AGENTIC COMMERCE REQUIRES

A clear outcome

The result the agent must reach

System access

The systems where the work happens

Defined authority

What the agent can complete and when a person must decide

The agent also needs clear instructions for changes and failures.

Every result must be verified

A booking is complete when it is confirmed

A payment is complete when the approved product is delivered

A report is useful when its sources and key values can be checked

Test every workflow before customers use it.

Agents create value when they complete work people can rely on.
